HIGH ACCURACY WITH TIMOTEX HAND PALLET TRUCK SCALE

The HPTC2000 Hand Pallet Truck, from mobile weighing specialist Timotex, offers a combination of high accuracy and a range of user-friendly features.

Available as either a checkweighing scale or as a trade-approved model - which enables sales invoicing by weight - it has a capacity of up to two tonnes and increments starting as low as 200 grams. The HPTC2000 is designed for a range of industrial applications where maximum versatility is required and benefits from accuracy of just 0.1 % of the applied load.

The Timotex Hand Pallet Truck is supplied complete with a battery and charger and can be operated continuously for up to thirty-five hours. The scale provides automatic switch off after one hour of non use to conserve battery power and for continuous use, a spare battery is available as an option. Available in stainless steel for use in wet environments, the load cells and cabling are protected to IP67 and the indicator to IP65.

The range of functions has been designed to match user requirements and enables the operator to zero the display, tare off the weight of the pallet or container, pick up and see the weight of the load and, after pressing Enter, see the number of loads weighed and their total weight. The T20410 display has the above features plus parts counting with cursor entry of piece weights, 6-digit product codes and memory for the last 10 entered values. An RS232 outlet is fitted as standard but it can instead be used to link to an optional printer. Trade Approval is an option with this display.

“We believe the HPTC2000 is an important part of our range and one which enhances our role as a leading supplier of mobile weighing equipment,” comments Managing Director, Brian Millar.

“We can point to scales working successfully in a range of industries including food, metal and foundries as well as in transport, distribution and warehousing - indeed all locations and operations where accuracy is an important consideration,” he adds.
