ROBUST CARRIAGE SCALE FROM TIMOTEX

Mobile weighing specialist Timotex has a wide range of industrial weighing solutions. The Carriage Scale opens up new opportunities for materials handling operations.

The system comprises a carriage, installed between the mast and the forks, and an electronically linked control unit positioned within reach of the driver in the cab. The system weighs the load on the forks to an extremely high level of accuracy and, importantly, operates reliably irrespective of the positioning of the load on the forks. Although obviously beneficial from a safety point of view, the load does not need to be evenly distributed in order for an accurate reading to be taken.

The scale from Timotex offers a range of helpful operational features to the user. The display maintains a running total as well as memorising a range of tare weights and can also accommodate customer and product codes for each transaction.

The scale can be supplied with a printer to enable permanent records to be kept and offers a downloading capability, either by an RS232 hand-held unit or through the company's RF Link system, which allows the fork lift truck to 'report back' to a computer located up to 500 metres away. The scale is available for lift-trucks with either FEM2 or FEM3 carriages of various widths.

The inclusion of the carriage scale in the Timotex range signifies a major step forward for the company, which has gained a leading position in this highly specialised field of materials handling. The carriage scale enables the company to offer a mobile weighing solution to virtually everybody involved in fork lift materials handling.

TIMOTEX

LEADERS IN MOBILE WEIGHING

Carriage Scale

Timotex offers an extensive range of mobile weighing solutions.

The full range comprises all known methods of load measurement for forklift trucks, electric pallet trucks, stackers and hand pallet trucks. Static warehouse scales are also available.
